EDUCATION

Bahria University <i>BS in Computer Engineering — GPA 3.47 / 4.0</i> - Currently in Semester 7 (Summer 2026). Completed 6 semesters so far. - Main courses: Databases, Operating Systems, Artificial Intelligence, Blockchain, Digital Design.	Islamabad, Pakistan <i>Aug 2023 – May 2027 (Expected)</i>
Islamabad Model College F-10/2 <i>Intermediate (Pre-Engineering) — Mathematics, Physics, Chemistry</i>	Islamabad, Pakistan <i>Aug 2021 – May 2023</i>
Bahria College Islamabad <i>Matriculation — Computer Science</i>	Islamabad, Pakistan <i>2019 – 2021</i>

WORK EXPERIENCE

Ninjas Code <i>SEO Intern</i> - Identified 50+ high-authority websites with domain rank above 1,000 as potential backlink sources for client SEO campaigns. - Made on-page changes that improved content quality and website scores. - Checked spam score of each website; selected only sites with spam score below 1, then created accounts and built backlinks to improve client domain authority. - Worked with the digital marketing team on 5 projects, learning the full campaign process. - Wrote weekly reports to share progress and results with the team.	Islamabad, Pakistan <i>Jul 2025 – Sep 2025</i>
Self-Employed <i>Home Tutor</i> - Taught Mathematics, Science, and Computer Studies to 10+ school students. - Built simple, custom lesson plans that helped students improve their exam results. - Kept long-term students and families for over 5 years through consistent teaching.	Islamabad, Pakistan <i>Jan 2021 – Present</i>

PROJECTS

ClinIQ — AI-Powered Healthcare Management System - Built a web app that connects patients, doctors, and admins in one platform. - Added an AI symptom checker that tells patients about possible illnesses, such as pneumonia or jaundice. - Built the system using Python (Flask), SQLite, and HTML/CSS. - Learned how to write software requirements, draw UML diagrams, and test an app using Agile steps.	2026
Student Stress Prediction — Machine Learning - Built and compared 3 ML models (Linear Regression, SVR, Random Forest) to predict student stress. - Cleaned and studied data from 3,000 university students using Python and WEKA. - Random Forest gave the best results; built a live demo dashboard for instant predictions.	2026
HRMS — Human Resource Management System - Built an HR system using Java Swing and SQL Server with 6 core modules. - Added features like salary slip generation, dark mode, and live SQL query logs. - Used safe data update methods (UPSERT) and ACID transactions to keep data accurate.	2026
CityNexus — Smart City OS - Built a simulation showing how operating systems support smart city services. - Covered process scheduling, memory management, and multi-threading using HTML, CSS, and JavaScript.	2026
Blockchain-Based Supply Chain Tracker - Designed a blockchain plan for tracking products and reducing the risk of fake goods. - Studied how smart contracts can be used to verify products in a supply chain.	2026
Bank Management System — Java OOP Project - Built a Java ATM simulation with login, signup, deposit, withdrawal, and balance check features. - Built using Java Swing and file handling as a university OOP project.	2024
